

Pest Patrol wordmark paths and review options

The approved Inter lockups are now self-contained SVG paths. Option A is the safe baseline; B and C are non-active mocks for the brand-font decision.

Active light-surface wordmark

Use on white, tint, and documentation surfaces.

Active dark-surface wordmark

Use on navy app chrome and dark masthead contexts.

A / Current Inter lockup

Keeps the approved Inter Black Italic direction. Lowest-risk default.

B / Inter Display

Same family, a touch more logo-like and compact. Good candidate if the mark should feel more branded without a personality jump.

C / Condensed service-signage

More truck-door and field-service in tone. Stronger higher risk for the admin product shell.

Focused font-direction questions

1. Should the product shell stay quiet and operational, or should the logo carry more truck-door personality?
2. Is the San Diego / Est. 1982 tagline part of the durable lockup, or should it become a campaign/context detail?
3. Should the final brand lean modern SaaS, local-service heritage, or a controlled hybrid?

Assets: packages/assets/brand for active SVGs; docs/design-system/assets/wordmark-options for inactive exploration SVGs.
